

Sérgio Almeida

Software Engineering Student @ FEUP

Profile Summary

Focused on back-end development, artificial intelligence, and data science. Experience building APIs, developing data-driven solutions, and rapidly prototyping real-world systems.

Experience

Artificial Intelligence Engineer – Curricular Internship – Armis Group (Feb 2026 – Jul 2026)

- Developed a RESTful API using ASP.NET Core for ticketing sales intelligence systems
- Used Python for data analysis and predictive models
- Integrated Azure SQL databases for structured data storage
- Contributed to a product aimed at real-world deployment for Liga Portugal

Software Engineer – Summer Internship – Webá (Jul 2026 – Sep 2026)

- Built an invoice-processing app that automated the reading and management of invoices.
- Extracted data through QR code and intelligent OCR, accepting all types of files.
- Deployed to a real production environment (Angular, .NET, Docker), where it is actively used by clients.
- Reduced manual data entry, improving processing speed, reliability, and overall user satisfaction.

Projects

Open Source Contributions

- Ultralytics(60k+ stars, 200M+ downloads): Leading Python AI framework for computer vision and YOLO object detection.
- Uno Platform(10k+ stars, 20M+ downloads): .NET framework for building cross-platform applications.

GTAV FiveM Roleplay Server – Co-Founder & Developer (2019 – 2023)

- Designed database and back-end systems supporting 100+ concurrent players
- Customized and optimized 3D assets used across multiple servers with thousands of players
- Technologies: Lua, JavaScript, PHP, MySQL, Blender, Photoshop

Competitions & Engineering Projects

AI Critical Challenge – 2nd Place (€500 Prize) (Feb 2025)

- Developed an AI assistant for visually impaired users with real-time voice interaction
- Integrated various APIs into a working system (speech-to-text, LLMs, text-to-speech, RAG)
- Full technical implementation in a 2-person team under 1 week

FEUP Engineering Days – 1st Place (Mar 2026)

- Achieved 1st place overall in a series of industry-related engineering and problem-solving challenges

EBEC – European BEST Engineering Competition (Mar 2026)

- Built a functional electromechanical prototype from scratch in 24 hours using Arduino

Education

Faculty of Engineering, University of Porto (FEUP) | 2023 – Present

Bachelor's in Software Engineering

Extracurricular Activities

- Tuna de Engenharia da Universidade do Porto
 - Main Organizer of XI Encontro Solidário de Tunas, a large-scale charity event with 1000+ people involved
 - Responsible for coordination, logistics, and team collaboration
- Centro de Eventos da FEUP
 - Technical support for audio, lighting, and recording/streaming for Faculty events
 - Real-time troubleshooting in live environments
